

Licking County Drug Overdose Prevention

September 2023

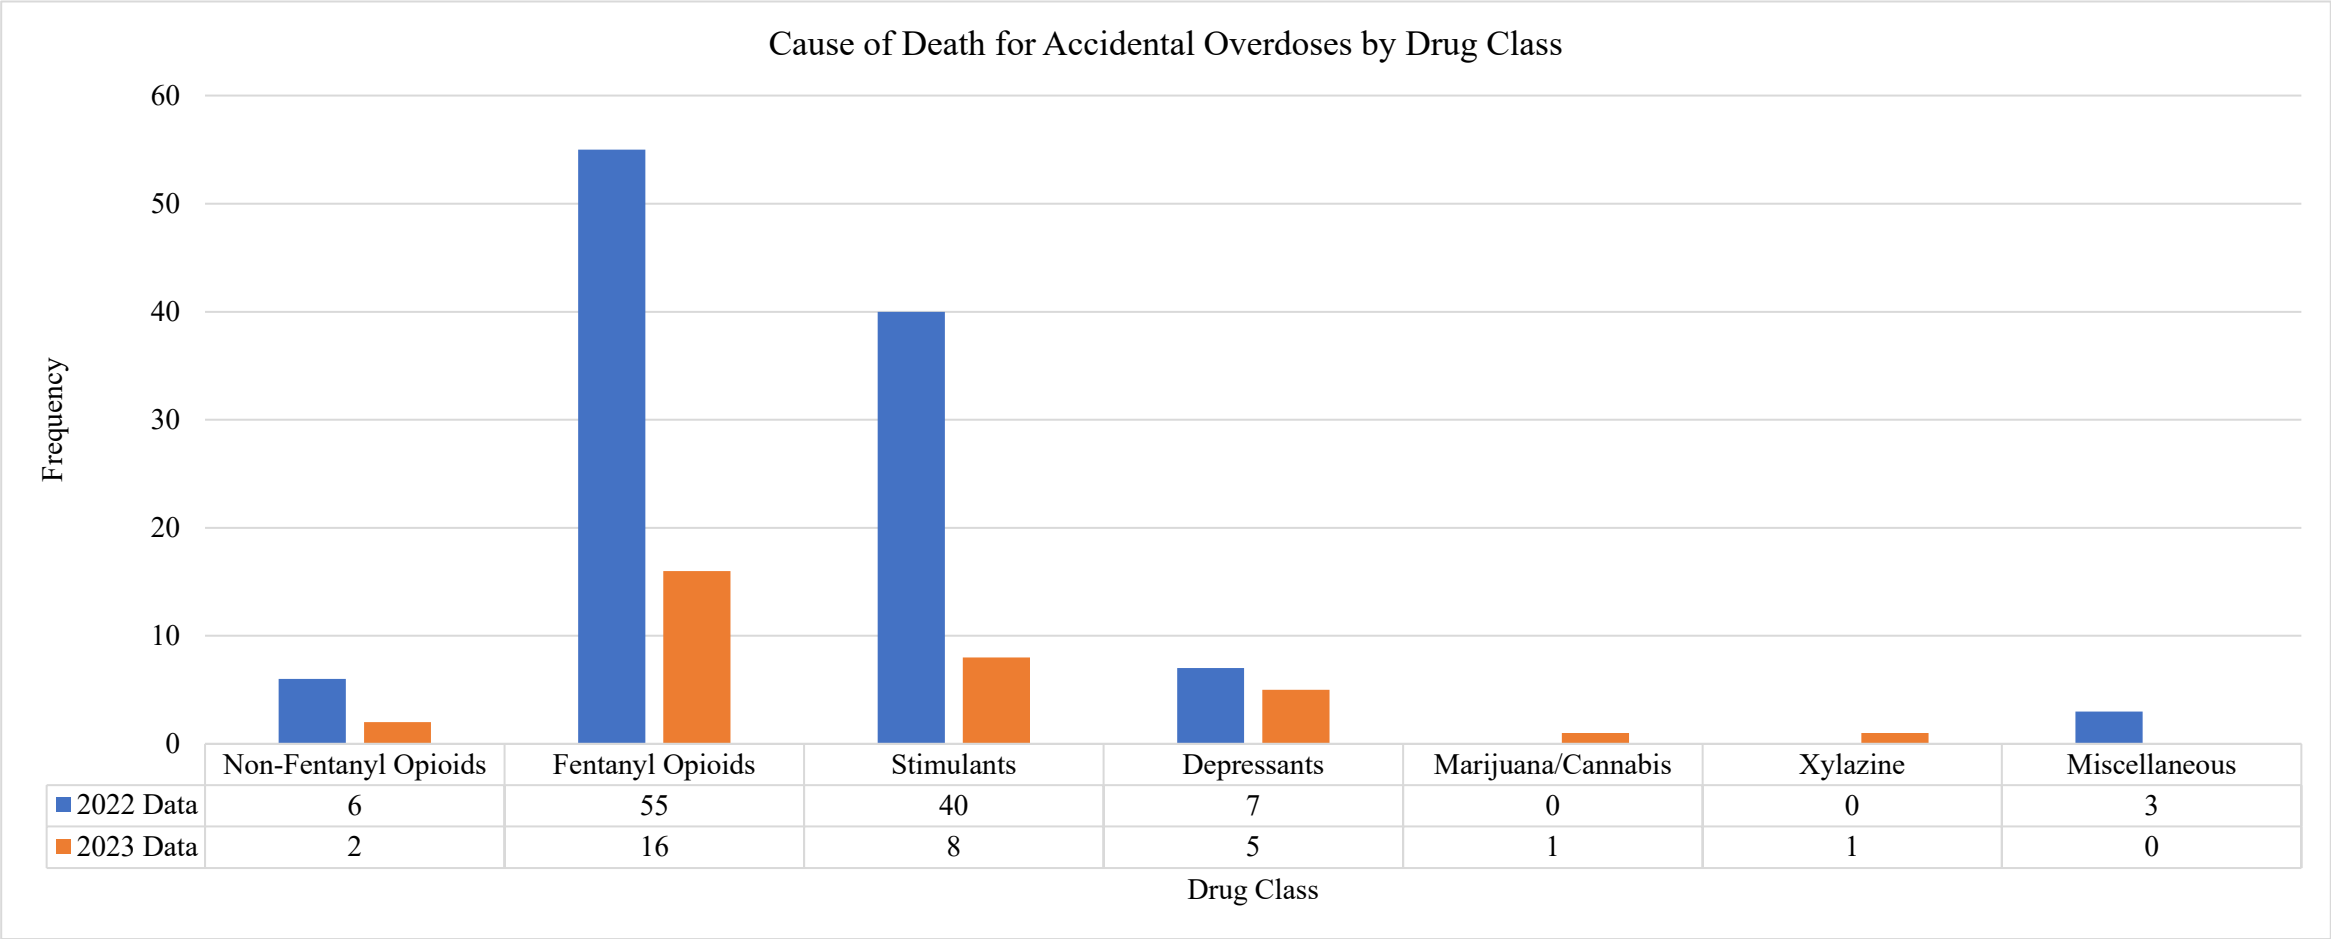

2023 Licking County Accidental Drug Overdose Fatalities (ADOF)

Above, the orange line represents the 4-year monthly average of confirmed ADOF from 2019-2022. The blue bars depict confirmed fatal overdose data for 2023. This data is confirmed by the Licking County Coroner’s Office (LCCO) and the Ohio Public Health Information Warehouse: Mortality Dataset.

*** Please note, this graph will be updated as toxicology reports become available.**

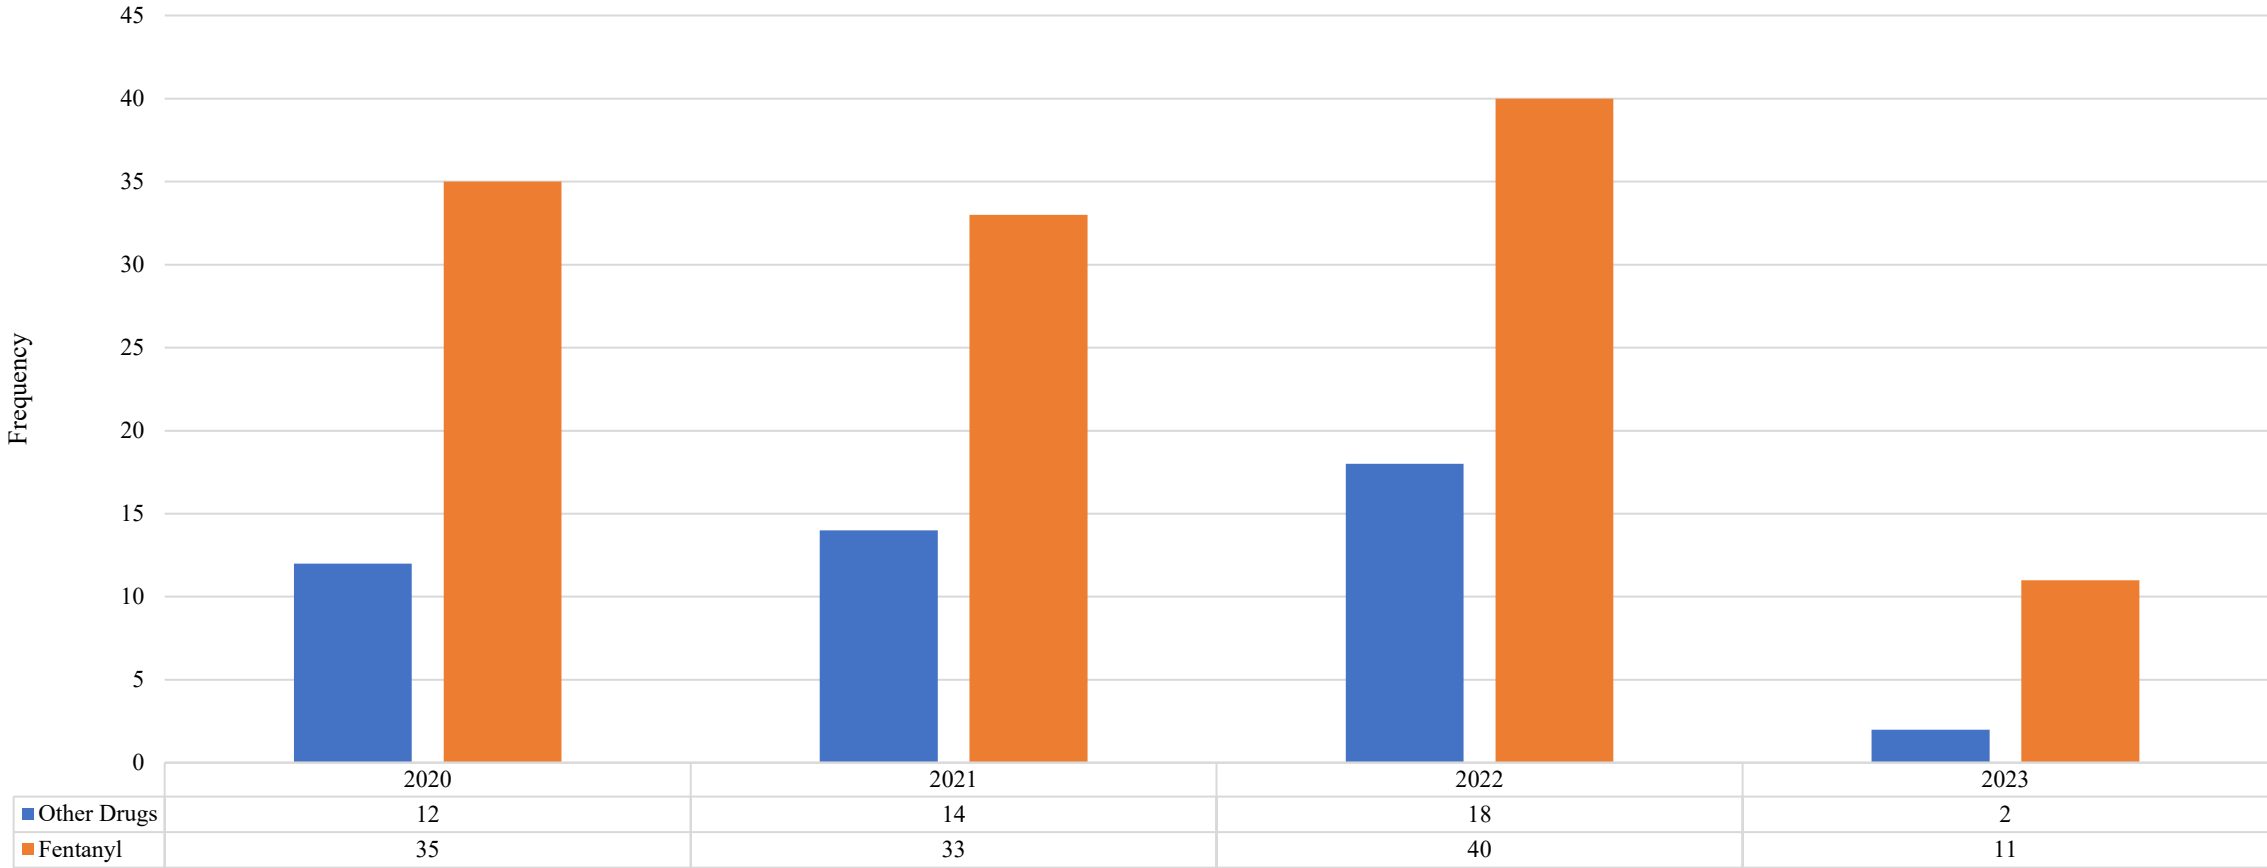

The graph above shows the frequency of 2023 *Cause of Death* substances for accidental drug overdoses by Drug Classes from the DEA’s “[Drugs of Abuse Resource Guide 2022 Edition](#)”. Data is confirmed by the Licking County Coroners Office toxicology reports and does not reflect the total number of overdoses reported through ODMAP.

*** Please note, this graph will be updated as toxicology reports become available.**

Accidental Fentanyl-Related Drug Overdose Fatalities

The graph above shows the comparison of fentanyl-related and non-fentanyl-related accidental overdose fatalities. Data is confirmed by the Licking County Coroners Office toxicology reports and does not reflect the total number of overdoses reported through ODMAP.

*** Please note, this graph will be updated as toxicology reports become available.**
